# **Operational Amplifier, Low** Power, 8 MHz GBW, **Rail-to-Rail Input-Output**

The NCS2005 provides high performance in a wide range of applications. The NCS2005 offers beyond rail-to-rail input range, full rail-to-rail output swing, large capacitive load driving ability, and low distortion. The inputs can be driven by voltages that exceed both power supply rails, thus eliminating concerns over exceeding the common-mode voltage range. The rail-to-rail output swing capability provides the maximum possible dynamic range at the output. This is particularly important when operating on low supply voltages.

Operating on supplies of 2.2 V to 32 V, the NCS2005 is excellent for a very wide range of applications in low power systems. With a supply current of 1.3 mA, the 8 MHz gain-bandwidth of this device supports applications where faster speeds are required. Placing the amplifier right at the signal source reduces board size and simplifies signal routing. The NCS2005 is available in a space-saving 5-pin SOT-23 package.

#### Features

- Wide Power Supply Range: 2.2 V to 32 V
- Common Mode Voltage Range Wider than Rail-to-Rail:  $V_{CM} = -0.1 \text{ V to } 5.1 \text{ V}$  @  $V_{S} = 5 \text{ V}$
- Wide Gain-bandwidth: 8 MHz typical
- Low Supply Current: 1.3 mA typical
- Stable with a 1 nF Capacitor Load with a Phase Margin over 25° @  $V_{S} = 10 V$
- Available in a Space-saving 5-pin SOT23 Package
- These devices are Pb-free, Halogen free/BFR Free and are RoHS Compliant

### **Typical Applications**

- Active Filters
- Voltage Referenced Buffers
- Sensors and Instrumentation
- Microphone Amplifiers
- ASIC Input Drivers
- Portable Communications
- PCMCIA Cards

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

1. Refer to ELECTRICAL CHĂRACTERISTICS and APPLICATION INFORMATION for Safe Operating Area.

2. Applies to both single supply and split supply operation. Continuous short circuit operation at elevated ambient temperature can result in exceeding the maximum allowed junction temperature of 150°C.

3. The maximum power dissipation is a function of  $T_{J(MAX)}$ ,  $T_{JA}$ , and  $T_A$ . The maximum allowable dissipation at any ambient temperature is  $P_d = (T_{J(max)} - T_A)/T_{JA}$ . All numbers apply for packages soldered directly to a PC board. 4. This device series incorporates ESD protection and is tested by the following methods:

ESD Human Body Model tested per JESD22-A114

ESD Charged Device Model tested per ANSI/ESD S5.3.1-2009

5. Moisture Sensitivity Level tested per IPC/JEDEC standard: J-STD-020A
