Descriptions

The DIO2087X is an ultra low-power comparator with a typical power supply current of 1.35 μ A. It has the best-in-class power supply current versus propagation delay performance. The propagation delay is as low as 1.3 μ s with 100mV overdrive at 1.4V supply.

Designed to operate over a wide range of supply voltages, from 1.4V to 5.5V, with guaranteed operation at 1.4V, 2.5V and 5.0V, the DIO2087X is ideal for use in a variety of battery-powered applications. With rail-to-rail common mode voltage range, the DIO2087X is well suited for single-supply operation.

Featuring a push-pull output stage, the DIO2087X allows for operation with absolute minimum power consumption when driving any capacitive or resistive load.

DIO2087X is available in the Green SOT23-5, SC70-5, SOIC-8, MSOP-8, SOP-14 and TSSOP-14 packages. The DIO2087X is ideal for use in handheld electronics and mobile phone applications. It is rated over the -40°C to 85°C temperature range
