

BFP520

Surface mount low voltage silicon NPN RF bipolar transistor

Product description

The BFP520 is a low noise device based on a grounded emitter (SIEGET™) that is part of Infineon’s established fifth generation RF bipolar transistor family. Its transition frequency f_T of 45 GHz, high gain, low noise and voltage characteristics at high frequencies make the device suitable for low voltage applications. It remains cost competitive without compromising on ease of use.

Note: $G_{ms} = IS_{21}/S_{12}I$ for $k < 1$; $G_{ma} = IS_{21}/S_{12}I(k-(k^2-1)^{1/2})$ for $k > 1$. In order to get the NF_{min} values stated in this chapter, the test fixture losses have been subtracted from all measured results. OIP_3 value depends on termination of all intermodulation frequency components. Termination used for this measurement is 50 Ω from 0.1 MHz to 6 GHz.
